

The diagram illustrates a complex RNA secondary structure, likely a ribozyme or a large ribosomal RNA subunit. The structure is composed of several interconnected loops and stems. The bases are color-coded: Adenine (A) in red, Uracil (U) in purple, Guanine (G) in green, and Cytosine (C) in blue. The 5' and 3' ends are labeled. The structure features a large multi-loop on the left, a central region with several stems and loops, and a large multi-loop on the right. The bases are connected by lines representing hydrogen bonds, forming a complex three-dimensional fold.
